

The third generation of integration systems

Our IP-based system revolutionizes the way
your hospital works. Less hardware,
more efficiency and perfect integration
into your existing infrastructure –
the future of healthcare is software-driven.

Your advantages at a glance

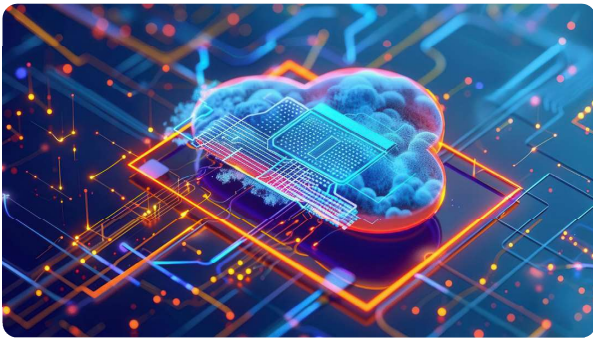

COST SAVINGS

Reduce operating costs through lower power consumption and more efficient use of resources, without compromising on quality.

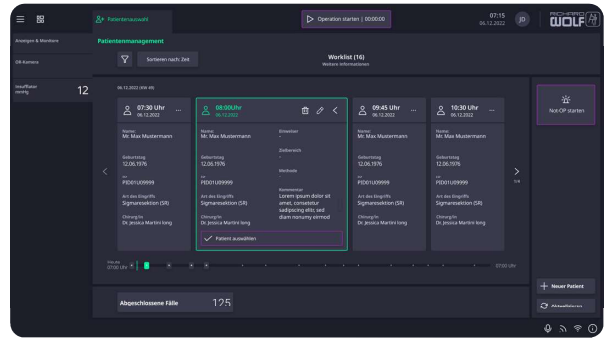

FUTURE PROOF

Scalability and flexibility ensure that the system grows with the requirements of your hospital.

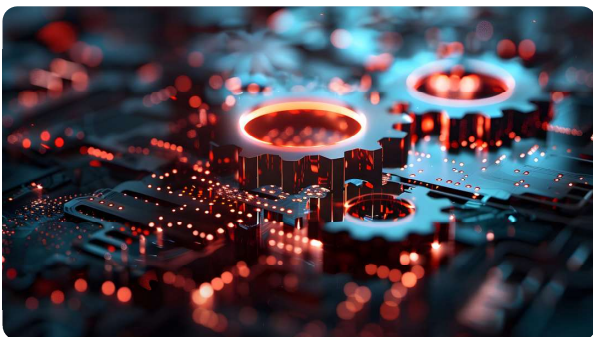

LESS HARDWARE, MORE EFFICIENCY

Fewer devices mean more space and flexibility – especially in the operating room, where the smaller hardware footprint make everyday life easier.

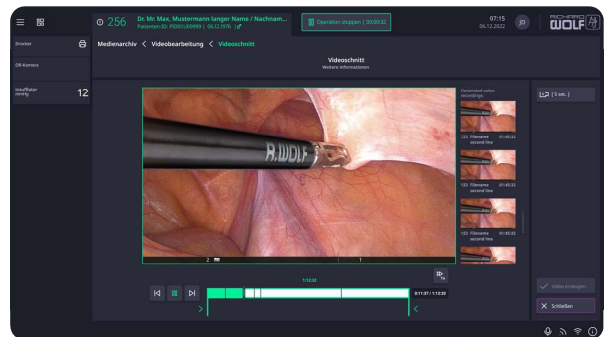

QUICK ACCESS TO WORKLISTS IN THE OR

All important information is immediately available. Doctors and OR staff can access all relevant data and worklists with a single click.

PROCESS OPTIMIZATION

Our solution enables smooth collaboration between administration, nursing staff and doctors. Automated processes minimize errors and optimize efficiency in all areas.

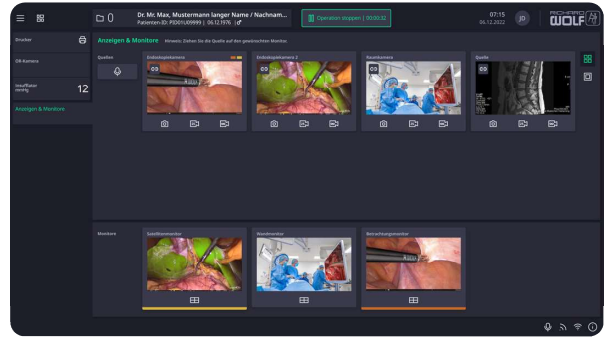

ADVANCE VIDEO EDITING IN THE OR

Videos can be edited during the operation and prepared for follow-up, which increases the efficiency of aftercare.

SOFTWARE IS THE KEY

The software supports control, minimizes sources of error and simplifies processes. No need for complex hardware setups – everything runs via a central, software-based control system.

SIMPLE VIDEO ROUTING IN THE ROOM

Videos and image sources can be controlled and distributed with minimal effort. Multiple image sources can be viewed and recorded simultaneously – for maximum transparency and overview.

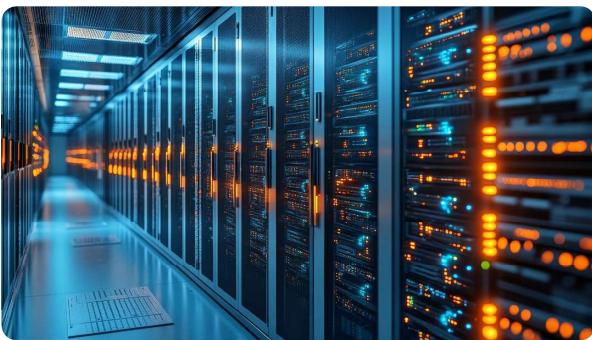

DATA SECURITY COUNTS

Sensitive patient data is not stored in the operating room. Everything remains in the hospital's secure infrastructure – for maximum data security.

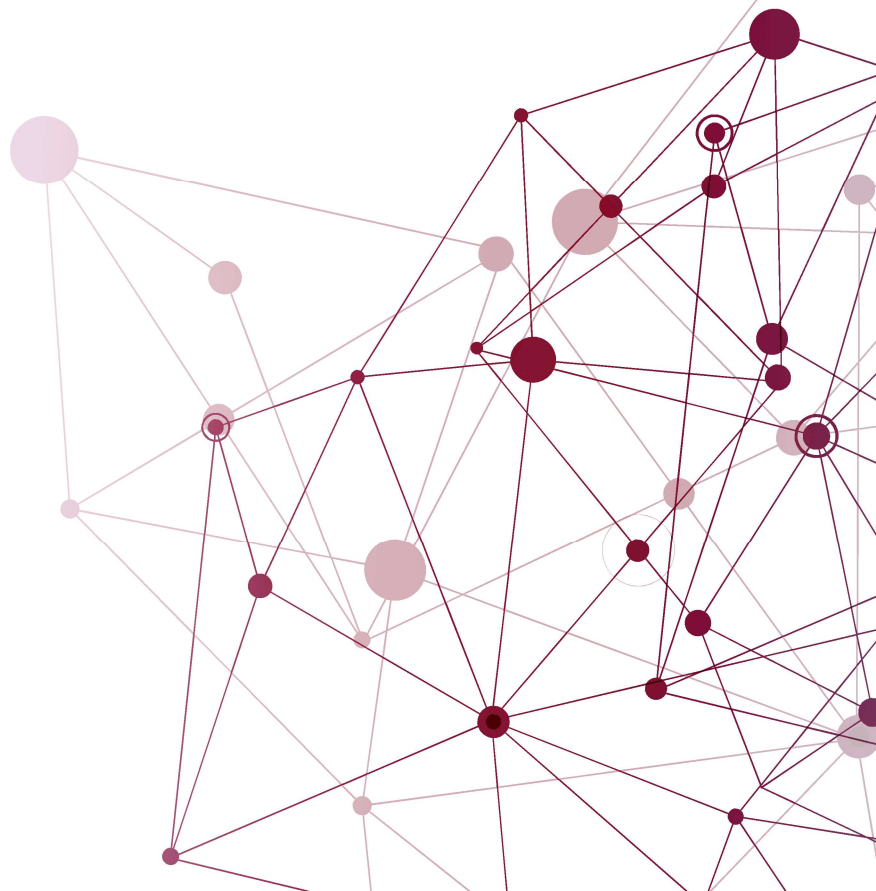

MAXIMUM DATA PROTECTION

Encrypted data transmission and strict security measures ensure the protection of sensitive information.

INSTANT DATA ARCHIVING

Once the operation is complete, all relevant data is immediately and automatically saved in the digital patient file - no delays, no data loss.
